

Certificate in Php

This course provides an in-depth exploration of PHP, a widely-used open-source server-side scripting language. Learners will learn PHP from its fundamentals to more advanced concepts, including Object-Oriented Programming (OOP), MySQL integration, and related web technologies like HTML, CSS, JavaScript, and Ajax. The course is designed to help students gain hands-on experience by creating dynamic web applications, understand the power of database connectivity, and work on real-world projects.

Syllabus & Skills covered (120 hours)

- **PHP Fundamentals:** Master the basics of PHP and its evolution for dynamic server-side programming.
- **Server-Side Scripting:** Learn to create, manage, and manipulate server-side code using PHP.
- **Web Development:** Build dynamic websites with PHP and MySQL, integrating databases for data management.
- **Object-Oriented Programming:** Apply OOP principles to enhance code maintainability and reusability.
- **Client-Side Integration:** Develop applications incorporating HTML, CSS, and JavaScript for client-side functionality.
- **Real-World Project Deployment:** Design and deploy practical PHP projects with SQL databases.
- **Secure Authentication:** Use PHP to manage CRUD operations and implement secure user authentication systems.

Career Opportunities

- **Junior PHP Developer**
- **Entry-Level Full Stack Developer (PHP)**
- **Web Application Tester (PHP Focused)**
- **Junior Web Application Developer**
- **Web Programmer**
